

Growth Sprint

Manual Actions Required — Do Before Launch

Ask My Notes • askmynotes.in • Generated 23 May 2026

This document lists every action that Claude Code cannot perform for you — account sign-ups, API keys, template submissions, database commands, and device testing. Complete everything in this list before going live.

& Start WhatsApp provider sign-up and Meta template submission ON DAY 1 — both take 2-5 business days and will block you if left for the end.

1. WhatsApp Business API Setup

BLOCKS Phase 1

1a. Choose and sign up with a provider

Recommendation: AiSensy — cheapest, best docs, India-focused.

- Go to <https://www.aisensy.com> !' sign up for Business account
- Verify your WhatsApp Business number (takes 1-2 business days)
- Estimated cost: ₹2,000–5,000/mo setup + ₹0.50–1 per message
- Alternatives: Gupshup (<https://www.gupshup.io>) or Interakt (<https://www.interakt.shop>)

1b. Collect these credentials after sign-up

Add each value to .env.local AND Vercel project environment variables:

WHATSAPP_PROVIDER

aisensy (or gupshup / interakt)

WHATSAPP_API_KEY

From your provider dashboard

WHATSAPP_PHONE_NUMBER_ID

Phone number ID (not the display number)

WHATSAPP_BUSINESS_ACCOUNT_ID

From Meta Business Manager

WHATSAPP_VERIFY_TOKEN

Generate: openssl rand -base64 32 (any secret string)

1c. Register the webhook URL in your provider dashboard

- URL: <https://askmynotes.in/api/webhooks/whatsapp>
- Events to subscribe: message_status_updates, messages (inbound)
- Set WHATSAPP_VERIFY_TOKEN to the same value used in the URL above

2. Meta WhatsApp Template Submission

2-5 BUSINESS DAYS

Submit all 6 templates in Meta Business Manager !' WhatsApp Manager !' Message Templates !' Create Template.
Do this on Day 1 in parallel with building. Templates block sending until approved.

trial_d3_revive_hinglish MARKETING Vars: {{1}} = first_name	Trigger: Day 3 cron — dead segment
trial_d3_low_intent_hinglish MARKETING Vars: {{1}} = first_name, {{2}} = questions, {{3}} = months_to_exam	Trigger: Day 3 cron — low_intent segment
trial_d3_high_intent_reinforce UTILITY Vars: {{1}} = first_name, {{2}} = days_active	Trigger: Day 3 cron — high_intent segment
trial_d6_warmup_hinglish MARKETING Vars: {{1}} = first_name, {{2}} = cards_count	Trigger: Day 5 warm-up cron
trial_d8_recovery_hinglish MARKETING Vars: {{1}} = first_name, {{2}} = cards_count	Trigger: Day 8 recovery cron
parent_referral_hinglish UTILITY Vars: {{1}} = student_name, {{2}} = payment_link	Trigger: Parent referral button (Day 7 page)

Full template body text: docs/launch/whatsapp-templates.md

3. Database Migrations

APPLY BEFORE TESTING

Run this command after merging Phase 1 code to production:

```
supabase db push
```

Or paste the SQL manually in the Supabase SQL Editor:

- File: supabase/migrations/20260523000001_activation_schema.sql

What the migration creates

- profiles columns added**
phone_number, whatsapp_opt_in, parent_phone_number, is_repeat_aspirant, exam_proximity_months_at_signup, preferred_language
- user_plans columns added**
is_trial (BOOLEAN), trial_started_at (TIMESTAMPTZ)
- New table: trial_segments**
Stores Day 3 activation signals and segment per user
- New table: whatsapp_messages**
Idempotent log of every WhatsApp message sent
- New table: growth_events**
Telemetry events for conversion analytics
- RLS policies**
Users can read own rows; service role bypasses for crons

4. Vercel Environment Variables

BEFORE DEPLOY

Add these in Vercel Dashboard !' Project !' Settings !' Environment Variables:

Variable	Value	Environment
WHATSAPP_PROVIDER	aisensy	All environments
WHATSAPP_API_KEY	From AiSensy dashboard	Production + Preview
WHATSAPP_PHONE_NUMBER_ID	From AiSensy dashboard	Production + Preview
WHATSAPP_BUSINESS_ACCOUNT_ID	From Meta Business Manager	Production + Preview
WHATSAPP_VERIFY_TOKEN	Same value as .env.local	All environments

5. Real Device Testing

BEFORE LAUNCH

Claude Code cannot test on physical devices. Test every UI change on both platforms before shipping.

Phase 1 — Onboarding phone collection step

- ☐ iPhone 12 or later — Safari: phone input, parent phone, repeat aspirant toggle
- ☐ Android (any) — Chrome: same flow
- ☐ Verify +91 prefix shows correctly, 10-digit limit enforced
- ☐ Verify STOP !' whatsapp_opt_in = false updates in DB

Phase 3 — Day 7 decision page

- ☐ iPhone Safari: hero number renders at 96px, no overflow
- ☐ Android Chrome: hero number renders at 96px, no overflow
- ☐ Options sheet: no horizontal scroll on small screens (320px width)
- ☐ Razorpay opens in <300ms — measure with DevTools Network or performance.now() log
- ☐ UPI appears as first payment method in Razorpay sheet
- ☐ Free option: one tap, no extra modal, goes to /dashboard
- ☐ Parent referral modal: message preview correct, send button works

Lighthouse mobile score target: "e85"

WhatsApp message tests (after AiSensy is live)

- ☐ Send test message to your own +91 number using dispatch service
- ☐ Verify delivery confirmation updates whatsapp_messages.status
- ☐ Reply STOP !' confirm whatsapp_opt_in = false in DB
- ☐ Reply YES !' confirm growth_events row with action='requested_payment_link'
- ☐ Test all 3 providers if you switch: AiSensy, Gupshup, Interakt have different payload shapes

6. Rollout Sequence (after all phases built)

DO NOT SKIP

Internal test

Trigger TCE for 5 founder/team accounts. Verify end-to-end: onboarding !' Day 3 cron !' Day 7 page !' payment.

Soft launch 10%

Set TCE_ENABLED=true, TCE_ROLLOUT_PERCENTAGE=10 in Vercel. Random assignment via user_id hash.

Wait 7 days

Check D7 metrics with master SQL query (docs/queries/tce-master.sql after Phase 7 builds it).

Expand to 50%

If conversion is in 8-12% range: set TCE_ROLLOUT_PERCENTAGE=50.

Wait 14 days

Check D30 retention. Target "e65%.

Full rollout

Set TCE_ROLLOUT_PERCENTAGE=100 if retention holds.

Weekly review

Run master query every Monday. Follow decision rules in docs/strategy/TCE_DECISION_RULES.md (Phase 7).

7. Anti-Goals (what NOT to do post-launch)

- ❑ Don't A/B test 10 hero variants before you have 1,000+ trials.
- ❑ Don't add more panels to the decision page.
- ❑ Don't introduce countdown timers.
- ❑ Don't email-blast lapsed users with discounts.
- ❑ Don't measure success by conversion alone — retention matters more.
- ❑ Don't change pricing or copy on the TCE page without 2 weeks of baseline data.

8. Weekly Monitoring Checklist

POST-LAUNCH ONGOING

Run every Monday after launch. Takes ~15 minutes.

Week 1 (daily)

- ☐ Check new trial sign-ups — phone collection working?
- ☐ Check Day 3 cron logs in Vercel — any errors?
- ☐ Manually check 1-2 users in /admin/trial-segments — segments correct?
- ☐ Verify WhatsApp messages delivered (check whatsapp_messages table)

Week 2-4 (weekly — run master SQL query)

- ☐ cohort_size: total trials this period
- ☐ pct_high_intent: target "e35% (if lower, activation is broken upstream)
- ☐ conversion_pct: target 10-15%
- ☐ d30_retention_pct: target "e65%
- ☐ parent_decisions vs self_decisions: track split

Decision rules (from Phase 7)

IF pct_high_intent < 35% !' Fix activation upstream (onboarding, briefing timing, push copy) — do NOT iterate on TCE page.
IF pct_high_intent "e 35% AND conversion < 10% !' Test hero variants, simplify CTA, check Razorpay friction.
IF conversion "e 12% AND d30_retention < 60% !' Converting wrong users — reduce conversion pressure, lengthen trial.
IF parent_decisions > self AND d30_retention < 50% !' Add student approval step before parent payment.

Quick Reference — Master Checklist

Print this page. Check off each item before launch.

Infrastructure

- ☐ Sign up with AiSensy (or Gupshup/Interakt)
- ☐ Get API key + Phone Number ID + Business Account ID
- ☐ Submit 6 Meta WhatsApp templates (start Day 1)
- ☐ Set WHATSAPP_* env vars in Vercel
- ☐ Set WHATSAPP_VERIFY_TOKEN in provider + Vercel
- ☐ Register webhook URL in provider dashboard

Database

- ☐ Apply migration: 20260523000001_activation_schema.sql
- ☐ Verify new columns exist in profiles + user_plans
- ☐ Verify trial_segments, whatsapp_messages, growth_events tables created

Device Testing

- ☐ iPhone Safari: onboarding phone step
- ☐ Android Chrome: onboarding phone step
- ☐ iPhone Safari: Day 7 decision page
- ☐ Android Chrome: Day 7 decision page
- ☐ Razorpay opens in <300ms (measure on real device)
- ☐ UPI is default payment method

WhatsApp Live Test

- ☐ Send test message to own number using dispatch service
- ☐ Verify delivery confirmation updates DB
- ☐ Reply STOP !' verify opt-out works
- ☐ All 6 templates approved by Meta

Rollout

- ☐ Internal test on 5 founder accounts
- ☐ Set TCE_ENABLED=true, TCE_ROLLOUT_PERCENTAGE=10
- ☐ Wait 7 days, check D7 metrics
- ☐ Expand to 50% if conversion 8-12%
- ☐ Wait 14 days, check D30 retention
- ☐ Full rollout to 100%
